

Did you know that in 2012 the earth just missed a terrible solar flare? Had that solar flare struck the earth's ionosphere, the resulting electromagnetic pulse could have crippled or destroyed all electronics on the planet. Were you ready for that kind of disaster? Did you even know such a disaster was possible? You do not need to be unprepared for cataclysms. This book, which is available for a limited time at a special rate, will teach you the specific steps you can take to ensure that you are not caught off guard in the face of a life altering disaster. So much misinformation exists about EMPs, but you can rest assured that this book breaks down all the facts and informs you of the things the so-called experts don't tell you. For example, survival doesn't begin with protecting and securing your electronics. It starts with securing your food and water supply. It follows principles of survivalism that any reasonable person should familiarize him or herself with regardless of the potential harm that might come. This guide book starts with why an EMP is a threat and then continues to go into the steps you need to take to prepare yourself for the prospect of disaster. Among the many things that you'll learn are: How to grow and raise your own food and preserve it, The critical skills everyone should know about maintaining and restoring mechanical equipment, How to treat basic injuries and wounds, apply first aid and heal from injuries or attacks, and How to construct a Faraday Cage to protect your gear from being destroyed. EMPs are dangerous and invisible threats. We had no idea how close we were to destruction in 2012. Don't be caught unprepared for disaster. The life you save may be your own. Getting Your FREE Bonus Download this book, and find BONUS: Your FREE Gift chapter right after the introduction or after the conclusion.
