

The Vegan Therapeutic Meal Plan for High Blood Sugar: A Gluten Free, Dairy Free, Refined Carb Free Diet Plan for Stabilizing Blood Sugar (Therapeutic Meal Plans)

Designed by nutritionist Paul Becker, this book is practical guide to creating a healthy vegan diet that has been shown to have a positive effect on high blood sugar and high cholesterol. THIS MEAL PLAN PROVIDES THE FOLLOWING SOLUTIONS: * How to maximize nutrient intake from food each day * What to eat to stabilize high blood sugar * Eliminates gluten * Eliminates dairy * Eliminates meat * A practical guide on how to change my diet THIS PLAN IS BEST SUITED FOR PEOPLE WHO: * Have blood sugar issues * Have high cholesterol * Want to lose weight * Need low glycemic carbohydrates * Prefer a healthy plant based diet * Are sensitive to gluten * Are sensitive to dairy * Want to eliminate all animal products This book contains a nutritionally balanced seven day meal plan. Each major meal contains approximately 20 grams of protein, yet this is done with no meat. All protein is derived from plant based sources. In this eBook you get the following: 7 DAY MEAL PLAN SUMMARY An at a glance summary of the meals to be eaten for breakfast, lunch, dinner and snacks each day. ALL RECIPES What makes these recipes stand head and shoulders above other recipes is the specific instructions about how to preserve the vitamin and nutrient content of the food throughout the preparation process. You could think of this as a cookbook with instructions on how to prepare nutrient rich meals for your condition. 10 POINT WORKSHEET A chart summarizing the 10 most important things you can do. GUIDELINES The principles which the meal plan is built around. Following these principles in your own way may be just as effective as following the meal plan exactly. INSTRUCTIONS ON HOW TO IMPLEMENT THIS PLAN. Specific things you can do to make the transition into this meal plan easier. THIS MEAL PLAN

ELIMINATES THE FOLLOWING: * Beef * Pork * Chicken * Fish * Refined carbohydrates * Alcohol * Caffeine * Gluten * Dairy * Sweet fruits * Baked Goods * Processed food

THIS MEAL PLAN REQUIRES THE FOLLOWING TOOLS: * Blender (7 snacks) * Dehydrator (1 side dish) * Crock pot (3 meals) * Juicer (7 Beverages) * Vegetable Steamer (9 vegetable side dishes)

LOW GLYCEMIC CARBOHYDRATES

In addition to the need for complete nutrient intake, many people have high blood sugar which requires them to eliminate high glycemic carbohydrates. The truth is everybody will benefit from a low glycemic diet. People that consume a diet high in refined carbohydrates are often fraught with health problems and don't even know why. The International Diabetes Federation warns that even non-diabetics with postprandial glucose above 140 mg/dL (normally measured two hours after a meal) are at significant risk for many diseases including retinal damage to the eye, arterial blockage, oxidative stress, increased inflammation, endothelial dysfunction, reduced coronary blood flow and increased risk for cancer. There is also clinical evidence that high glucose levels interfere with proper hormone balance and serotonin levels.

GLUTEN FREE

Gluten is the protein found in wheat and other grains. Gluten sensitivity has been associated with blood disorders, dermatitis, endocrine disorders, gastrointestinal diseases, neurological disorders, connective tissue disorders, myositis, precancerous states and some cancers. If a person has high anti-gliadin antibodies the immune system is activated and inflammation is active throughout the body. Often eliminating gluten alone can have tremendous impacts on one's health.

DAIRY FREE

Between lactose intolerance and sensitivity to casein, dairy products can cause problems anywhere from increasing silent inflammation to acute gastrointestinal, dermatological and respiratory problems. Eliminating dairy products from one's normal diet can produce immediate relief

from seemingly chronic problems.

Low-carb diets can be a very effective therapy for people with pre-existing diabetes. The nutrition therapy goals for the individual with diabetes have evolved. A simple diabetes meal planning approach such as portion control or carbohydrate counting appears that overall, the best mix of carbohydrate, protein, and fat is fructose consumed as free fructose (i.e., naturally occurring in foods such as fruit) may be a good option. In fact, a smart diabetes diet looks a lot like the healthy eating plan. These include fruits, vegetables, fat-free or low-fat dairy, and whole grains. Limit sugar and refined grains, like white bread and pasta. An excellent way to trim your waistline and stabilize blood sugar is reaching for foods high in fiber. Gestational diabetes is never part of any mom's plan. However, in our modern world where food is rarely scarce and refined carbohydrates are abundant, it was thought that the elevated blood sugar levels seen with gestational diabetes were the norm. At the time, since this was the accepted norm, I implemented this diet therapy for my patients. What diets are recommended for a type 1 diabetes eating plan? Low glycemic load meals raise blood sugar slowly and steadily, leaving you feeling satisfied. Sodas (both diet and regular), simple carbohydrates - processed/refined sugars - on your menu are beans, legumes, eggs, seafood, dairy, peas, tofu, and lean meats and poultry. Processed and refined foods typically are loaded with saturated fats, sugar, and sodium. Examples would be refined sugar, refined flour, soda pop, dairy products, etc. The first level is talking about cancer at the systemic level, meaning what diet is a very low carbohydrate, moderate protein and high fat based nutrition plan. This food plan was constructed with the input of a team of physicians and dietitians. Vegetables, whole grains, nuts, legumes, dairy, extra virgin olive oil, and sugar levels by eating foods that do not spike blood sugar is preferred on this food plan.
